GitHub

Abilities

Summary

Third-year Computer Engineering student focused on Data Science, Artificial Intelligence, and Machine Learning, with hands-on experience in Python, data analysis, exploratory data analysis, data preprocessing, visualization, SQL, and machine learning concepts. Building practical solutions using AI, Generative AI, and Agentic AI while developing strong software and problem-solving skills. Seeking Data Science or AI/ML internship opportunities to apply analytical and programming skills to real-world datasets and applications.

Education and training

B.E. in Computer Engineering — 3rd Year

13 Sep 24 – 13 Jul 28

Bachelor of Engineering (Computer Engineering)

Currently pursuing undergraduate studies with a focus on Data Science, Artificial Intelligence, Machine Learning, software development, algorithms, and emerging AI technologies.

Personal skills

Communication skills

Communication, teamwork, collaboration, presentations, technical communication

Organisational / managerial skills

Project planning, task management, documentation, research-oriented learning, structured problem solving

Job-related skills

Data Science, Data Analysis, Exploratory Data Analysis (EDA), Data Preprocessing, Data Cleaning, Data Visualization, Machine Learning, Model Evaluation, Artificial Intelligence, Generative AI, Agentic AI, SQL, Web Development

Digital skills

Python, Pandas, NumPy, Matplotlib, SQL, Jupyter Notebook, Google Colab, Anaconda Prompt, Git, GitHub, Canva

Other skills

Recommendation systems, data-driven applications, AI/ML solutions, continuous learning in emerging AI technologies

Further information

Projects

Communication

Canva

- **Movie Recommendation System**

Developed a movie recommendation system using Python and data science techniques. Performed data preprocessing and exploratory analysis on movie data and implemented feature-based similarity to generate relevant movie recommendations.

- **KrishiSaar AI — Agricultural Intelligence Platform**

Developed an AI-powered agricultural intelligence platform with modules for farm management, crop activities, expenses, income, reminders, and analytics. Implemented a structured data-driven backend with authentication, database operations, and role-scoped access.

- **HeatShield AI — Urban Heat Risk Platform**

Built an AI-powered hyperlocal urban heat-risk decision-support platform for Pune. Developed a web application using React, Vite, Tailwind CSS, Supabase, and Google Maps integration to present location-based risk information and actionable insights.

- **ASCEND — AI Personal Growth OS**

Designed an AI-powered personal growth application focused on structured self-development, goals, missions, reflections, and progress tracking, combining user-centric UI/UX with AI-enabled workflows.

- **NutriBox — Healthy Meal Subscription Platform**

Developed a vegetarian healthy-meal subscription concept focused on personalized meal options and a practical digital user experience. Explored data-driven personalization and product-oriented application design.

- **Hostel Mess Management Application**

Designed a digital hostel mess management concept to streamline meal information, student interaction, and mess-related operations through a centralized web-based interface.

- **AI & Data Science Projects**

Continuously developing hands-on projects involving Python, data analysis, machine learning, Generative AI, Agentic AI, web development, and data-driven application development.

Courses

- **Data Science & AI Learning**

Building practical skills in Python, Pandas, NumPy, data visualization, machine learning, SQL, artificial intelligence, Generative AI, Agentic AI, Git/GitHub, and web development.
